

## ALKEMY OVERDRIVE

### QUICK STARTING GUIDE:

Alkemy overdrive is a dual independent pedal in one box. A 100% clean boost and a hyper dynamic overdrive with some very cool and useful sonic nuances. Beside its simplicity you can preset the order of two pedals giving you the possibility to have a volume or a gain boost.

Full instructions on [www.redsevenamplification.com](http://www.redsevenamplification.com)

INPUT = signal input ;

OUTPUT = signal output ;

POWER = 9 volts ONLY center negative

RMT = TRS remote latching control. Tip = bypass, ring = I/II selection.

### SUGGESTED SETTINGS:

*"Clean boost"*

*"Transparent drive"*

*"Heavy overdrive"*

*"Bridge pickup solo"*

### Controls:

- **Volume:** output volume control (drive side only);
- **Tone:** passive tone control (drive side only);
- **Gain:** gain control (drive side only);
- **Boost:** boost level (boost side only);
- **FAT/NORMAL:** choose two different structured of gain (drive side only);
- **CLIPPING:** choose two different clipping style, diode or LED (drive side only);
- **ON/OFF:** turn on and off the overdrive side. Truebypass relay bases bypass;
- **BOOST:** turn on and off the boost side. Truebypass relay bases bypass.
